    </plugins>
  </build>
</project>

```

## Src/main/java

### Create package com.example.UserManager

#### Create UserManagerApplication.java

```

package com.example.UserManager;

import org.springframework.boot.SpringApplication;

import org.springframework.boot.autoconfigure.SpringBootApplication;

```

```
@SpringBootApplication

public class UserManagerApplication {

    public static void main(String[] args) {

        SpringApplication.run(UserManagerApplication.class, args);

    }

}
```

## Create package com.example.UserManager.controller

### Create AppErrorController.java

```
package com.example.UserManager.controller;

import org.springframework.boot.web.servlet.error.ErrorController;
import org.springframework.web.bind.annotation.RequestMapping;

public class AppErrorController implements ErrorController {

    @RequestMapping("/error")

    public String handleError() {

        //do something like logging

        return "error";

    }

    @Override

    public String getErrorPath() {

        return null;

    }

}
```

### Create MainController.java

```
package com.example.UserManager.controller;

import org.springframework.stereotype.Controller;
import org.springframework.ui.ModelMap;
import org.springframework.web.bind.annotation.GetMapping;
```

```
import org.springframework.web.bind.annotation.RequestParam;

@Controller

public class MainController {

    @GetMapping(value = "/")

    public String showIndexPage(ModelMap model,

    @RequestParam(value = "name", required = false, defaultValue = "World") String name) {

        model.addAttribute("name", name);

        return "index";

    }

}
```

### Create UserController.java

```
package com.example.UserManager.controller;

import org.slf4j.Logger;

import org.slf4j.LoggerFactory;

import org.springframework.beans.factory.annotation.Autowired;

import org.springframework.stereotype.Controller;

import org.springframework.ui.ModelMap;

import org.springframework.web.bind.annotation.GetMapping;

import org.springframework.web.bind.annotation.ModelAttribute;

import org.springframework.web.bind.annotation.PostMapping;

import org.springframework.web.bind.annotation.RequestMapping;

import org.springframework.web.bind.annotation.RequestMethod;

import org.springframework.web.bind.annotation.RequestParam;

import com.example.UserManager.entities.User;

import com.example.UserManager.services.UserService;

@Controller

public class UserController {
```

---

```
//controls the functionality of the user entity
```

```

@Autowired

private UserService userService;

Logger logger = LoggerFactory.getLogger(UserController.class);

@GetMapping("/users")

public String showUsers(ModelMap model) {

    logger.info("Getting all users");

    Iterable<User> users = userService.GetAllUsers();

    logger.info("Passing users to view");

    model.addAttribute("users", users );

    return "users";

}

@RequestMapping(value = "/search/{id}", method = RequestMethod.POST)

public String searchUser(ModelMap model, @RequestParam("id") int id) {

    logger.info("Searching for a user");

    User user = userService.GetUserById(id);

    logger.info("Passing Searched User to View");

    model.addAttribute("userSearch", user);

    return "search";

}

@PostMapping("search/update")

public String updateUser(ModelMap model, @ModelAttribute("update") User user) {

    logger.info("Updating a User");

    userService.UpdateUser(user);

    model.addAttribute("updatedUser", user);

    return "update";

}

```

```
}
```

## Create UserExceptionHandler.java

```
package com.example.UserManager.controller;

import org.springframework.http.HttpStatus;

import org.springframework.http.ResponseEntity;

import org.springframework.web.bind.annotation.ControllerAdvice;

import org.springframework.web.bind.annotation.ExceptionHandler;

import com.example.UserManager.exceptions.UserNotFoundException;

@ControllerAdvice

public class UserExceptionHandler {

    @ExceptionHandler(value=UserNotFoundException.class)

    public ResponseEntity<Object> exception(UserNotFoundException ex) {

        return new ResponseEntity<>("Product not found", HttpStatus.NOT_FOUND);

    }

}
```

## Create package com.example.UserManager.entities

### Create User.java

```
package com.example.UserManager.entities;

import javax.persistence.Entity;

import javax.persistence.GeneratedValue;

import javax.persistence.GenerationType;

import javax.persistence.Id;

@Entity

public class User { //The Entity of a User; What it is.

    @Id

    @GeneratedValue(strategy=GenerationType.AUTO)

    private Integer id;
```

```
private String name;

private String email;

private String password;

public User() {

    super();

}

public User(Integer id, String name, String email, String password) {

    super();

    this.id = id;

    this.name = name;

    this.email = email;

    this.password = password;

}

public Integer getId() {

    return id;

}

public void setId(Integer id) {

    this.id = id;

}

public String getName() {

    return name;

}

public void setName(String name) {

    this.name = name;

}

public String getEmail() {

    return email;
```

```

    }

    public void setEmail(String email) {

        this.email = email;

    }

    public String getPassword() {

        return password;

    }

    public void setPassword(String password) {

        this.password = password;

    }

    @Override

    public String toString() {

        return (id.toString() + " " + name + " " + email + " " + password);

    }

}

```

## Create package com.example.UserManager.exceptions

### Create UserNotFoundException.java

```

package com.example.UserManager.exceptions;

public class UserNotFoundException extends RuntimeException {
    private static final long serialVersionUID = 1L;
}

```

## Create package com.example.UserManager.repositories

### Create UserRepository.java

```

package com.example.UserManager.repositories;

import org.springframework.data.repository.CrudRepository;

import org.springframework.stereotype.Repository;

import com.example.UserManager.entities.User;

```

```
@Repository
```

```
public interface UserRepository extends CrudRepository<User, Integer> {

    public User findByName(String name);

}
```

## Create package `com.example.UserManager.services`

### Create `UserService.java`

```
package com.example.UserManager.services;

import java.util.Optional;

import org.springframework.beans.factory.annotation.Autowired;

import org.springframework.stereotype.Service;

import com.example.UserManager.entities.User;

import com.example.UserManager.exceptions.UserNotFoundException;

import com.example.UserManager.repositories.UserRepository;

@Service

public class UserService {

    @Autowired

    private UserRepository userRepository;

    public Iterable<User> GetAllUsers() {

        return userRepository.findAll();

    }

    public User GetUserByName(String name) {

        return userRepository.findByName(name);

    }

    public User GetUserById(Integer id) {

        Optional<User> foundUser = userRepository.findById(id);

        if(!foundUser.isPresent()) throw new UserNotFoundException();

        return foundUser.get();

    }

}
```

```

    }

    public User updateUser(User userToUpdate) {

        return userRepository.save(userToUpdate);

    }

}

```

## Src/main/resources

### application.properties

```

spring.jpa.hibernate.ddl-auto=update
spring.datasource.url=jdbc:mysql://localhost:3306/mywork
spring.datasource.username=root
spring.datasource.password=password
logging.level.org.springframework.web: DEBUG
spring.mvc.view.prefix=/WEB-INF/jsp/
spring.mvc.view.suffix=.jsp
server.port=8080

```

## src/main/webapp/WEB-INF/jsp

### Create error.jsp

```

<!DOCTYPE html>
<html>
<body>
<h1>Something went wrong! </h1>
<h2>Our Engineers are on it</h2>
<a href="/">Go Home</a>
</body>
</html>

```

### Create index.jsp

```

<html>
<body>
<h2>Spring Application</h2>

<h2 class="hello-title">Hello ${name}!</h2>
<a href="users">List Users</a>
<form action="search/{id}" method="post">
Enter ID Number: <input name="id" type="text" id="id" placeholder="1" required/>
<input name="Submit" type="submit"/>
</form>

</body>

```

```
</html>
```

## Create search.jsp

```
<%@ page language="java" contentType="text/html; charset=UTF-8"
    pageEncoding="UTF-8"%>
<%@ taglib prefix="form" uri="http://www.springframework.org/tags/form"%>
<!DOCTYPE html PUBLIC "-//W3C//DTD HTML 4.01 Transitional//EN"
    "http://www.w3.org/TR/html4/loose.dtd">

<html>
<style>
table {
    float: left;

}

th {
    border-bottom: 1px solid black;
    text-align: left;
}
</style>
<body>

<h2>Search for User</h2>

<table>
    <tr>
        <th>ID</th>
        <th>Name</th>
        <th>Email</th>
        <th>Password</th>
    </tr>
    <tr>
        <td>${userSearch.id}</td>
        <td>${userSearch.name}</td>
        <td>${userSearch.email}</td>
        <td>${userSearch.password}</td>
    </tr>
</table>

<br />
<br />
<br />
<br />
<br />
<br />
<form:form action="update" method="post" commandName="update">
    <h3>Update This User?</h3>
    <p>User ID: ${userSearch.id}</p>
    <input type="hidden" name="id" id="id" value="${userSearch.id}" required/>
    <label for="name">New Name:</label><br/>
    <input type="text" name="name" id="name" value="${userSearch.name}"
    required/><br/>
```

```

        <label for="email">New Email:</label> <br/>
        <input type="text" name="email" id="email" value="{userSearch.email}"
required/><br/>
        <label for="password">New Password:</label><br/>
        <input type="text" name="password" id="password" value="{userSearch.password}"
required/><br/><br/>
        <input type="submit" value="Submit"/>
    </form:form>
    <br />
    <br />
    <a href="/">Return to Menu</a>
</body>
</html>

```

### Create update.jsp

```

<html>
<body>
<h2>Update Successful</h2>
Updated User Credentials: {updatedUser.toString()}
<br/><br/>
<a href="/">Return to Menu</a>
</body>
</html>

```

### Create users.jsp

```

<%@ taglib uri="http://java.sun.com/jsp/jstl/core" prefix="c"%>
<html>
<style>
table {
float: left;
}

table, th, td {
border: 1px solid black;
}
</style>
<head></head>
<body>
    <h2>Users Page</h2>
    <table>
    <tr><th>ID</th><th>Name</th><th>Email</th><th>Password</th></tr>
    <c:forEach items="{users}" var="user" varStatus="count">
        <tr id="{count.index}">
            <td>{user.id}</td>
            <td>{user.name}</td>
            <td>{user.email}</td>
            <td>{user.password}</td>
        </tr>
    </c:forEach>
    </table>
</body>

```

</html>

### Pushing the code to your GitHub repositories:

- Open your command prompt and navigate to the folder where you have created your files.

**cd <folder path>**

- Initialize your repository using the following command:

**git init**

- Add all the files to your git repository using the following command:

**git add .**

- Commit the changes using the following command:

**git commit . -m "Changes have been committed."**

- Push the files to the folder you initially created using the following command:

**git push -u origin master**
